DETAILED ACTION

Response to Arguments

1. Regarding the objections to claims 3-7 set forth in the Office Action dated 5/29/08, the applicant has amended claim 3 to remove the parentheses provided around "for said highest write speed", "for said lowest write speed", and "for said middle write speed between said highest and lowest write speeds". Therefore, these objections are withdrawn.
2. Claim 9 has been cancelled by the applicant. Therefore, the previous rejection is moot.
3. This application is in condition for allowance except for the presence of claims 1-2, 10-11 and 14-17 directed to a species non-elected without traverse. Accordingly, claims 1-2, 10-11 and 14-17 been cancelled.
4. Claims 3-7, 12, 18, and 20-23 are now in condition for allowance.
5. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

In the Claims:

Cancel claims 1-2, 10-11 and 14-17.

Allowable Subject Matter

Claims 3-7, 12, 18, and 20-23 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art taken either singularly or in combination fails to anticipate or fairly suggest the limitations of the independent claims 3, 12, 18, 21, 22, and 23.

Regarding claim 3, the prior art taken either singularly or in combination fails to anticipate or fairly suggest a method for controlling a writing waveform on an optical disk in an optical disk apparatus in which information is written to said optical disk while a write speed is varied, said method comprising the steps of: from optimum writing waveforms each established for one of a plurality of write speeds, determining a writing waveform parameter for an arbitrary speed other than said plurality of write speeds: irradiating laser light to said optical disk based on said writing waveform parameter to write information; and *based on information on at least a first writing waveform parameter and a second writing waveform parameter optimum for a highest write speed and a lowest write speed, respectively, and a third writing waveform parameter optimum for a middle speed therebetween, deriving a writing waveform parameter for each speed between said highest speed and said lowest speed*, wherein said first writing waveform parameter for said highest write speed and said second writing waveform parameter for said lowest write speed are optimum parameters determined through test write operation; and *wherein said third writing waveform parameter for said middle write speed between said highest and lowest write speeds is a recommended parameter for said middle write speed written on said optical disk beforehand.*

Dependent claims 4-7 are allowed with their respective base claims.

Claims 12, 18, and 20-23 are allowed for the reasons provided in the Office Action dated 5/29/08.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Yokoi (2002/0085470) discloses an optical information recorder employing an improved recording power control scheme. Yokoi (US 6,459,666) discloses an information recording apparatus and method. Fukumoto (US PgPub 2003/0086346) discloses an optical disk device. Sato (US 6,563,775) discloses an optical disc unit. Honda (US PgPub 2002/0003760) discloses an optical disc recording method. Matsumoto (US PgPub 2002/0141308) discloses an optical disc recording under adjustable conditions. Ushiyama et al. (US PgPub 2002/0176338) discloses an information recording method and optical disc apparatus. Chen (US PgPub 2003/01233520) discloses a method for controlling writing power in CAV mode. Koike (US 5,309,419) discloses a disk recording apparatus with light amount control based on multiple tests performed on a test region at multiple disk rotational velocities. Wu (US 6,535,470) discloses a method and apparatus for writing data in a disk drive.
